

Publication - National Ocean Service - U.S. Coast Pilot 1, covers the coasts of Maine, New Hampshire, and part of Massachusetts, from West Quoddy Head in Maine to Provincetown in Massachusetts. Major ports are at Portsmouth, NH and Boston, MA., 2012 (42nd) Edition.

Corrections

Chapter 7, Paragraph: 384, read:

The entrance is deep and clear with the exception of Porter- field Ledge in the middle of the entrance. The depths in the channel range from over 50 feet in the entrance to 8.3 feet at the head. Passage is sometimes made by local small craft at high water across the ledge between Indian Island and Beauchamp Point.

(L 194-2012; DD 21413)

Chapter 9, Paragraph: 49, read:

A dredged channel, just southeast of Stage Island, leads through Wood Island Harbor to the entrance of The Pool. In 2010, the controlling depth was 6.3 feet. A dredged anchorage basin is just inside the entrance to The Pool. In 2010, the basin shoaled to bare along the edges with greater depths in the entrance and the southwest corner. Biddeford Pool Channel Buoy 10 marks the entrance to the basin. Three stone icebreakers are along the northeastern side of the basin. Care should be taken by strangers not to anchor too close to them. They are difficult to see at night at or near high water. Neither should they attempt to go between the northeasternmost icebreaker and the fish wharf because of a partially submerged breakwater between the breaker and the wharf.

(L 192-2012; DD 21411)

Chapter 9, Paragraph: 365, read:

Rye Harbor, 4.2 miles southwestward of Whaleback Light, is a small cove used by pleasure and fishing boats. A stone breakwater extending southward from **Ragged Neck Point** is marked at the end by a light. Another breakwater extends northeastward from the point at the south side of the entrance to Rye Harbor. These breakwaters are about 6 feet above high water. A rocky ledge, covered 3½ feet, extends to within 10 feet of the entrance channel on the south side and is marked by buoys. A lighted whistle buoy marks the approach about 0.75 mile southeastward of the harbor entrance. A dredged channel leads through the breakwaters to anchorage basins on the north and south sides of the channel and State anchorage at the western limit. In 2010, the controlling depth was 6.6 feet at midchannel except shoaling to 3.5

feet near the end of the channel. The north anchorage had depths of 5.5 to 6 feet while depths of 6.3 to 8 feet were available in the south anchorage except shoaling to bare near the limits of each anchorage. Depths of 6.4 to 8 feet were available in the State anchorage except shoaling to 5.2 near the northwestern limit and 1.9 feet near the southwestern limit.

(L 645-2012; DD 21685)

Chapter 10, Paragraph: 18, read:

A Federal project provides for a 20-foot channel from the northeasterly part of Gloucester Harbor into Inner Harbor, connecting with 20-foot north and south access channels which lead on either side of the Gloucester State Fish Pier to the head of the harbor. An 18-foot channel and a 16-foot channel lead from the Inner Harbor entrance channel into Harbor Cove and Smith Cove, on the northwestern and southeastern sides of Inner Harbor, respectively. (See Notice to Mariners and latest edition of chart for controlling depths.) The channels are marked by buoys.
